Inflating spacetime

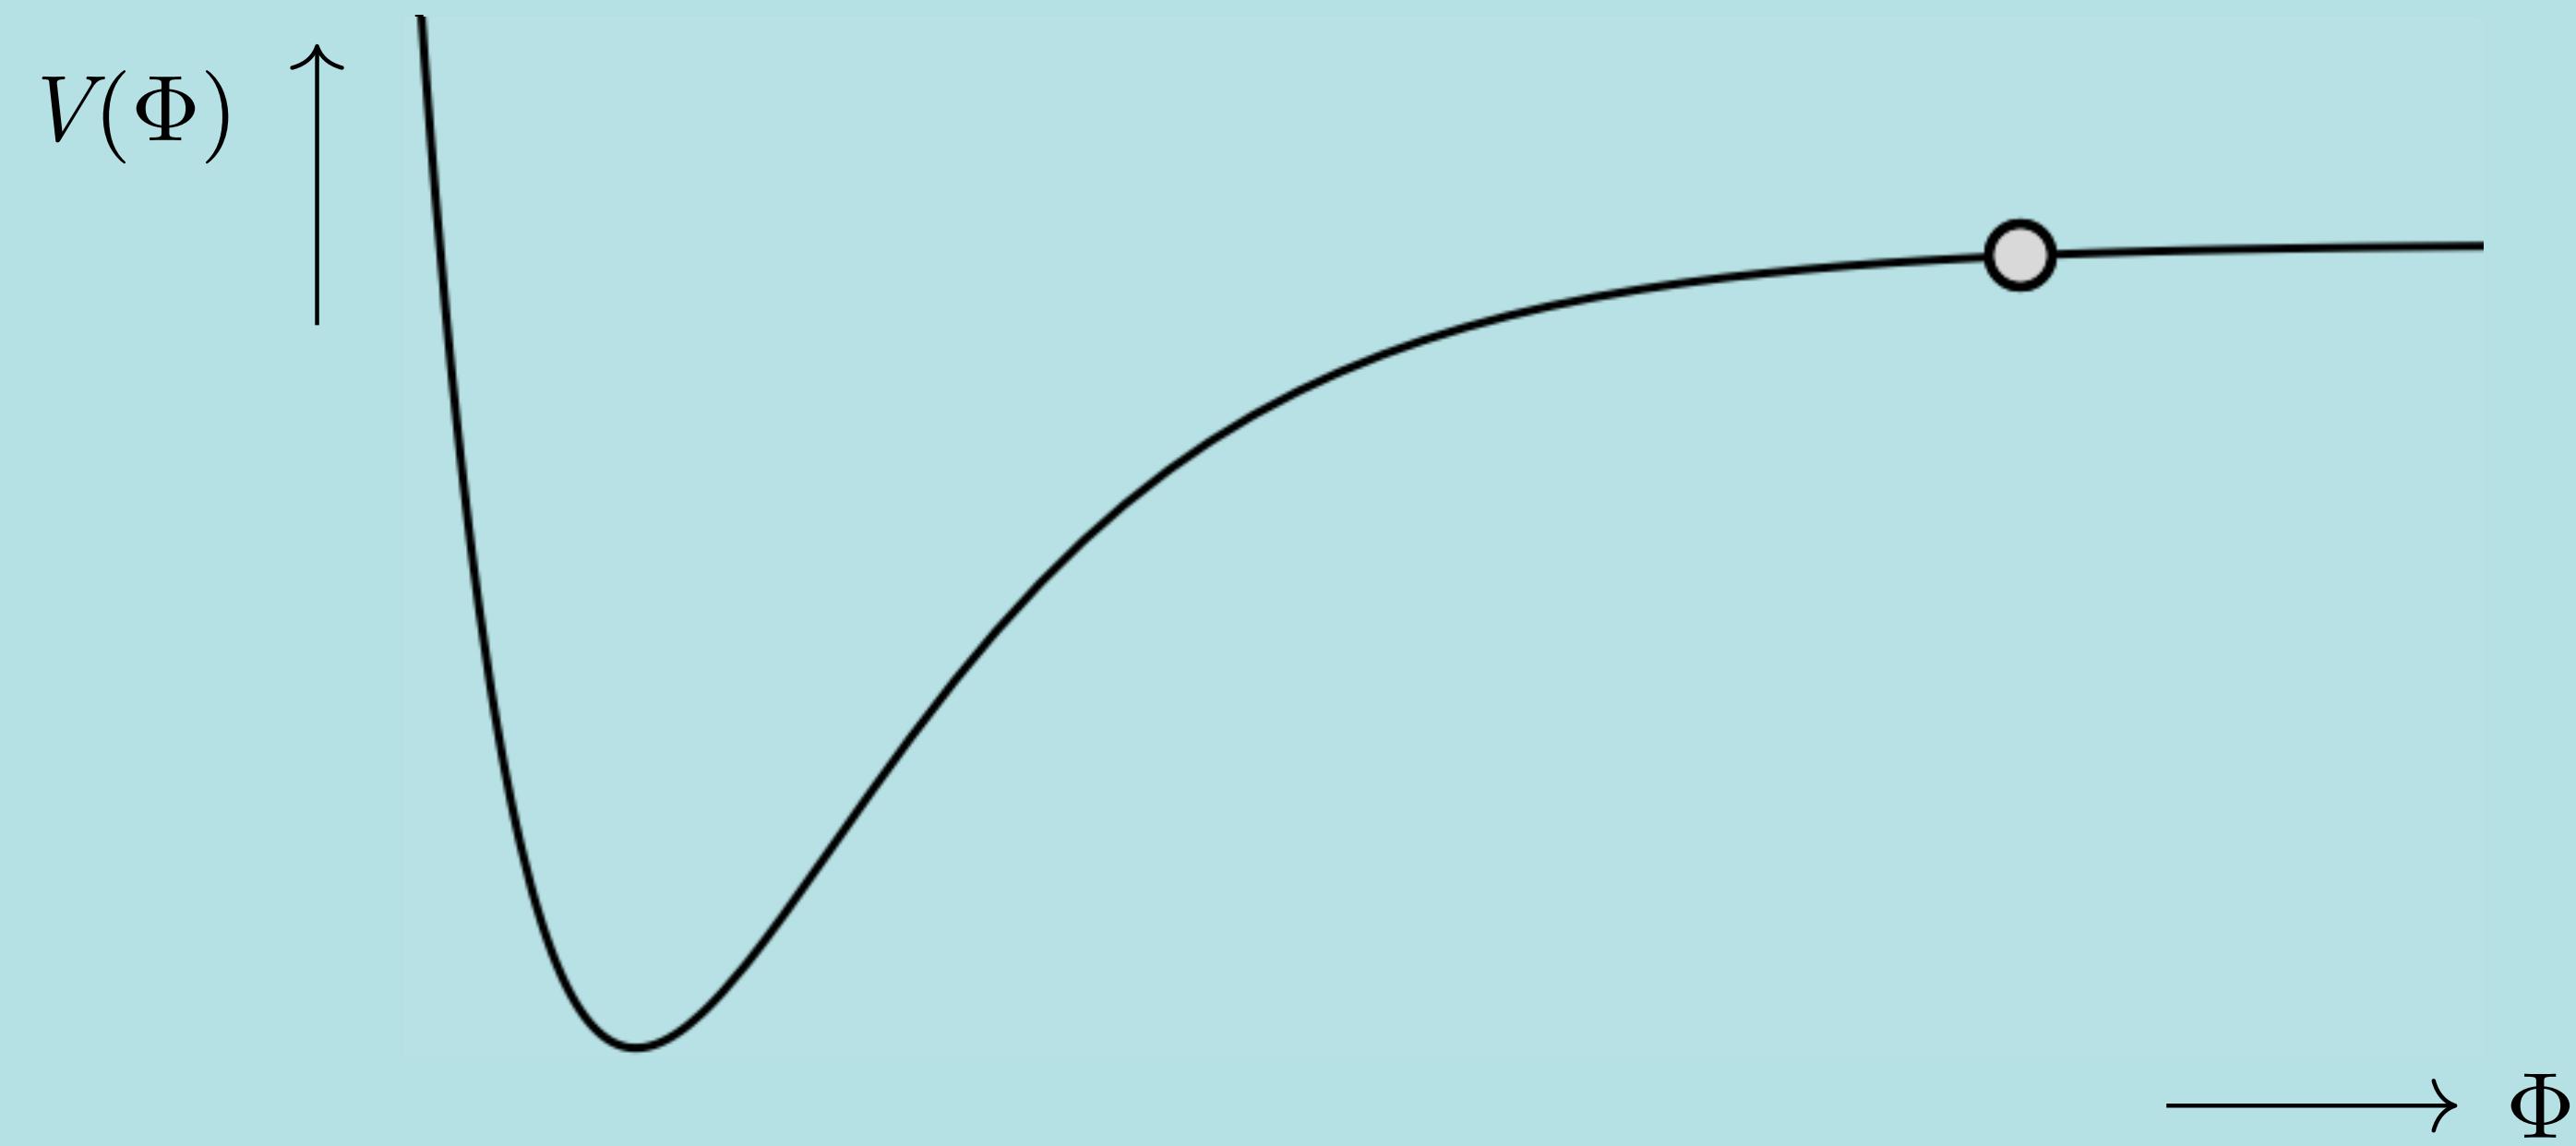

Simplest incarnation: a slowly rolling scalar field in FRW spacetime, $ds^2 = dt^2 - a(t)^2 dx^2$

$$\ddot{\Phi} + 3H\dot{\Phi} + V'(\Phi) = 0$$

$$H \equiv \frac{\dot{a}}{a} = \left(\frac{\rho_\Phi}{3M_P^2} \right)^{1/2} \quad \text{with}$$

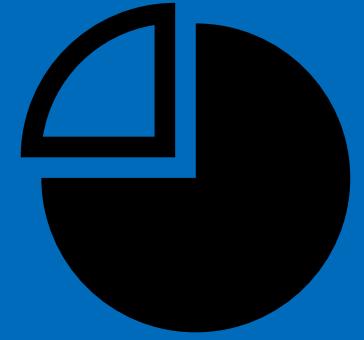

$$\rho_\Phi = \frac{1}{2}\dot{\Phi}^2 + V(\Phi)$$

$$P_\Phi = \frac{1}{2}\dot{\Phi}^2 - V(\Phi)$$

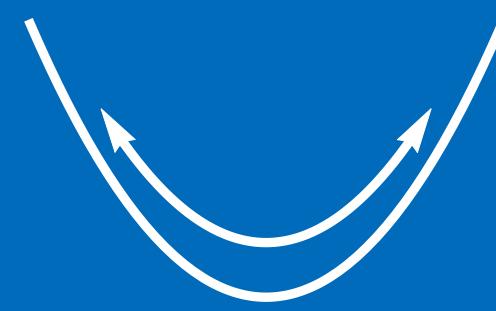

When inflation ends, reheating begins

A. Berera, PRL 75 (1995), 3218

A. Berera, I. G. Moss and R. O. Ramos, Rept. Prog. Phys. 72 (2009), 026901

Inflaton slows down by thermal friction

$$\ddot{\Phi} + (3H + \Gamma)\dot{\Phi} + V_{\Phi} = 0$$

$$\dot{\rho}_r + 4H\rho_r - \Gamma\dot{\Phi}^2 = 0$$

Thermal noise is an extra source of density fluctuations

$$\delta\ddot{\Phi}_k + (3H + \Gamma)\delta\dot{\Phi}_k = \xi_k + \dots$$

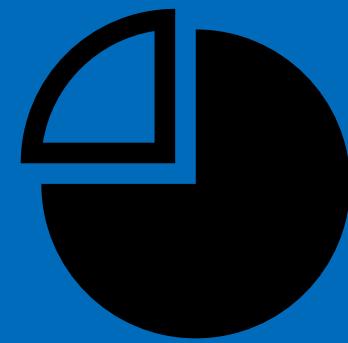

Daniel Green @nu_phases · 1 jun. ...
3/8 The inflaton needs to continually produce particles

Problem: most couplings that do this will destroy inflation / scale invariance

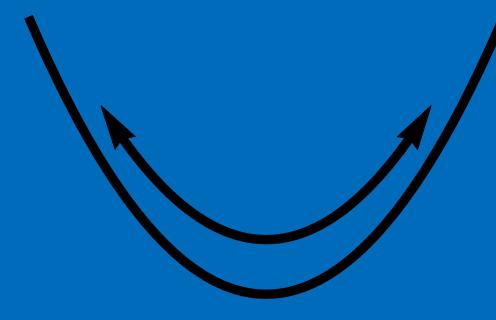

Worse problem: If you write a coupling that preserves scale invariance, it was shown you don't get normal friction

Reheating + BSM is not always simple

Multifield effects

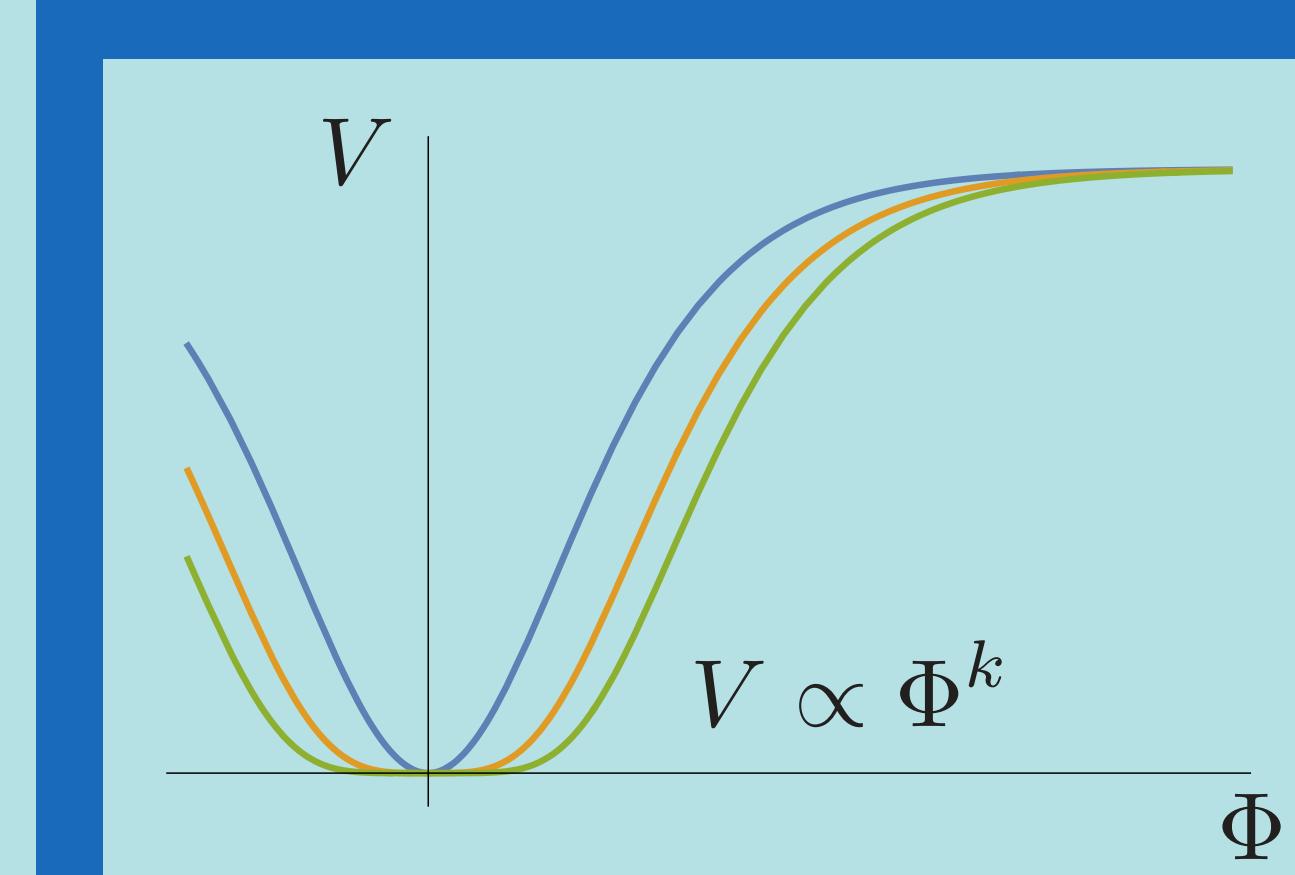

J. Ellis, MG, N. Nagata, D. Nanopoulos and K. Olive, JCAP 07 (2017), 006

In-medium effects

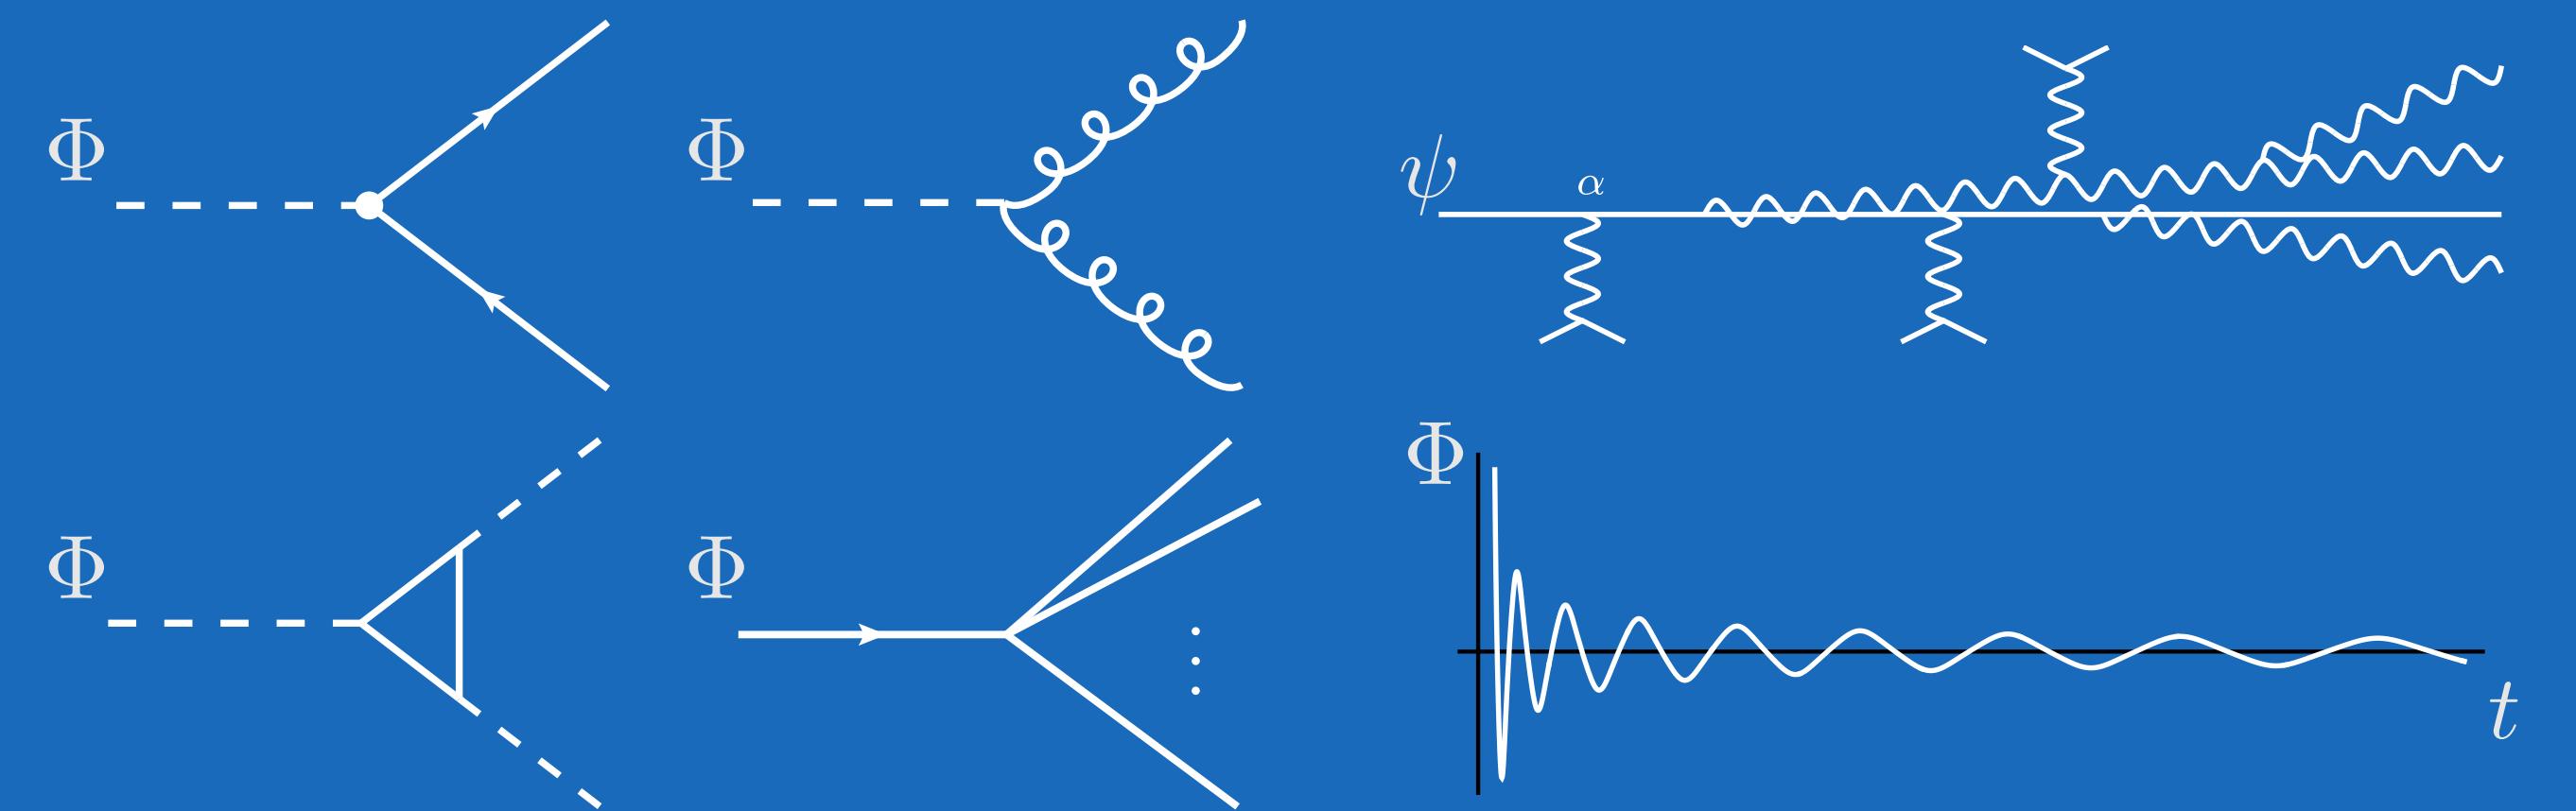

V. Rychkov and A. Strumia, PRD 75 (2007), 075011

More general potentials

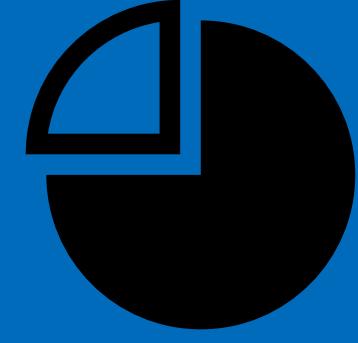

MG, K. Kaneta, Y. Mambrini and K. A. Olive, PRD 101 (2020), 123507 ;

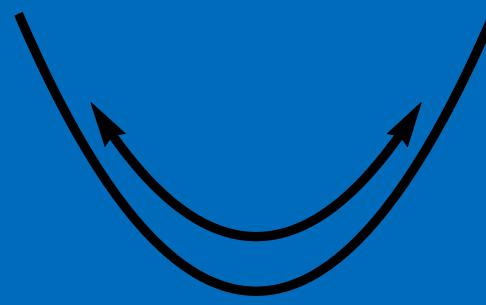

MG, K. Kaneta, Y. Mambrini and K. A. Olive, JCAP 04 (2021), 012

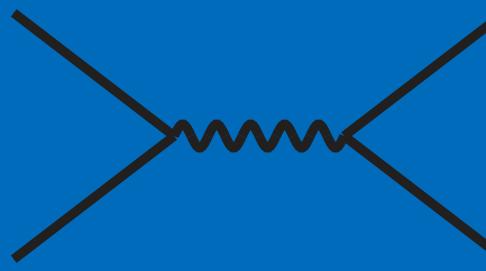

1. Beyond WIMPs

2. Inflation & reheating

3. FIMPs

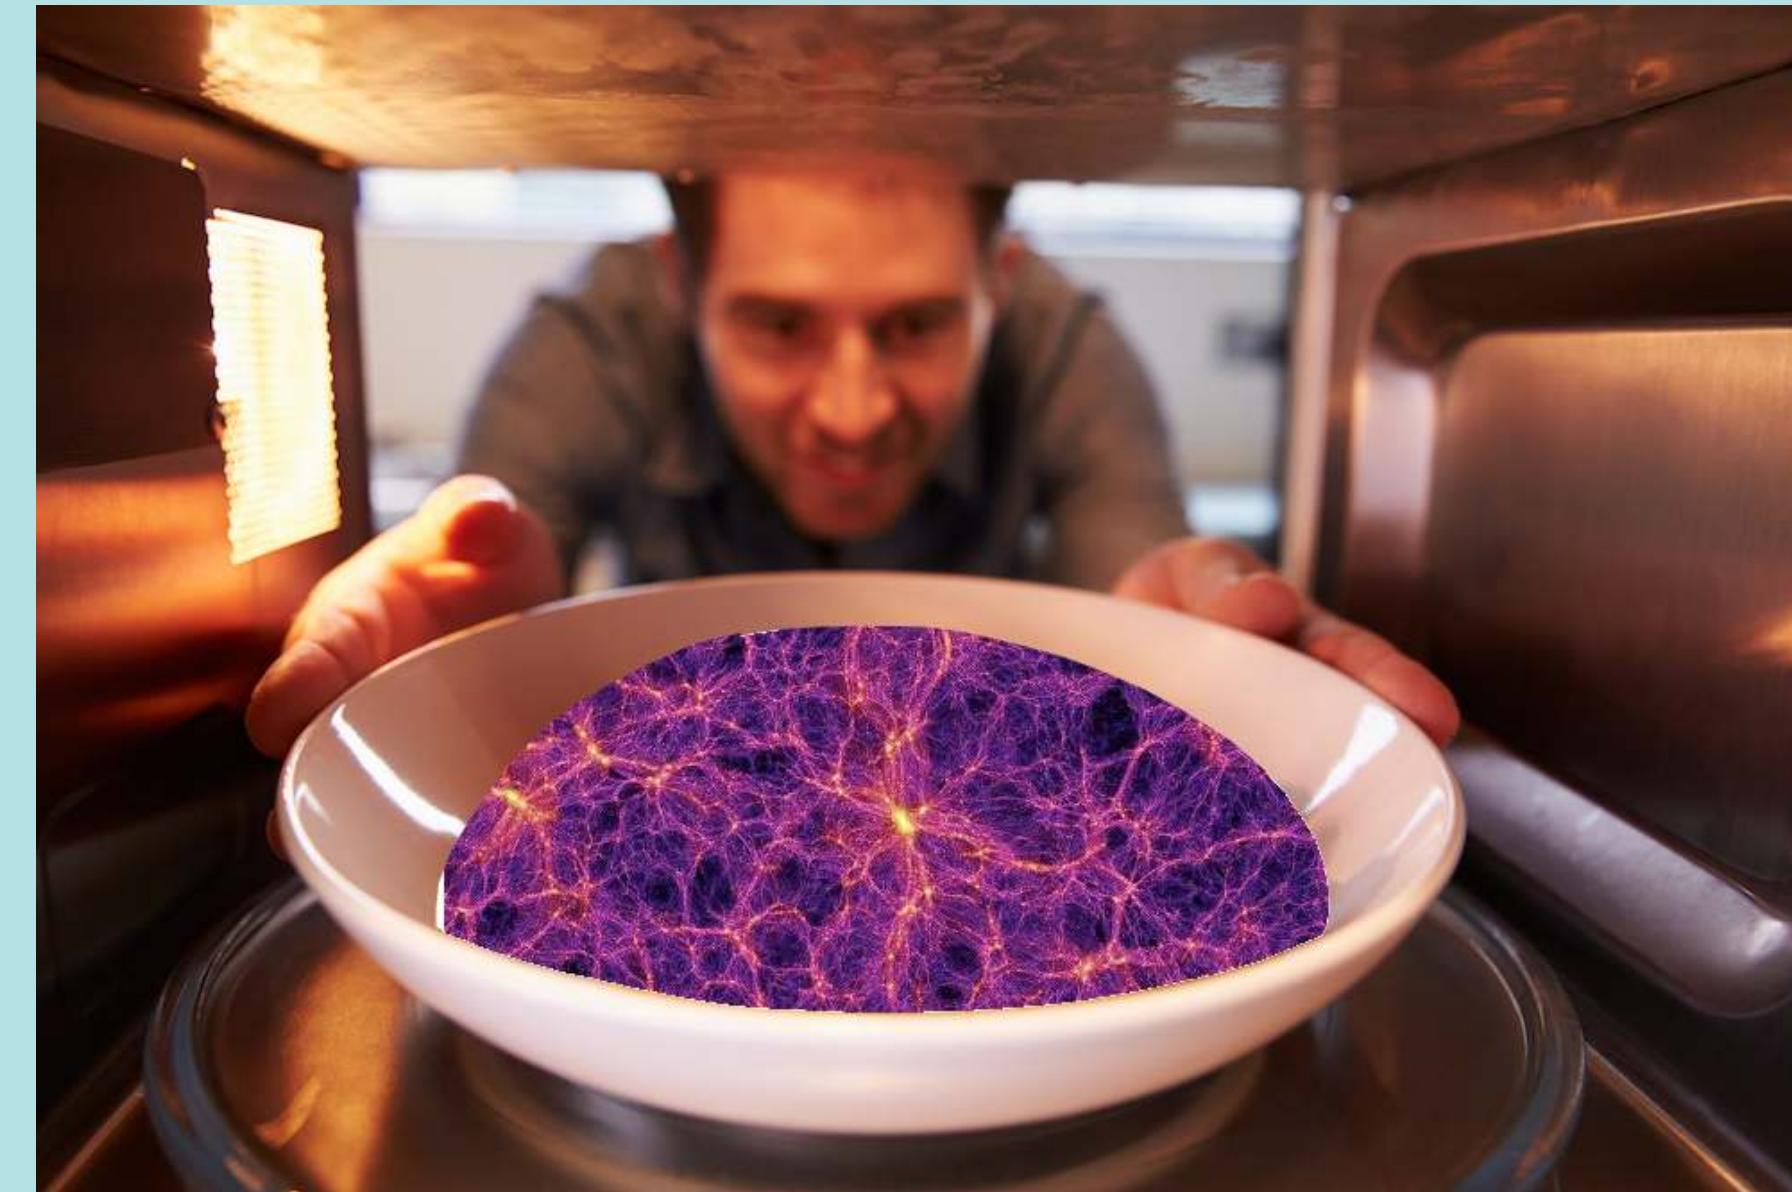

4. Compact objects

5. Prospects

Conclusion

- The light beyond the WIMP: the Big Bang itself?
- Dark matter as a probe of early dynamics
- Indirect connection with low energy physics (neutrinos, CMB, proton decay, ...)
- Same ideas, different applications (condensed matter, baryon asymmetry, finance, ...)

¡Gracias!
